

Team 4 - Murphy's Law  
Project Milestone 3

The working demo includes: a MySQL database, which has tables for the details of events, locations, organizers, and users; an HTML page where users can apply to create an event; an HTML page which shows the map of Boulder; and a home page.

During development, we had to come up with an easy-to-understand and stylish layout for the website, and we also had to narrow down what exactly our app could do with the back end. Our TA suggested a number of hosting sites and strategies to use, as well as advice on search functions.
